

Fibu Android Bug Report :

DATE : 06-04-26

Issue 1: Intermittent Data Loss (Gems & Certificates)

- **Summary:** Users are reporting that previously earned Gems and Certificates have disappeared from their profiles.
- **Description:** This is an intermittent issue where assets already collected by the user are no longer visible in the "My Library" or "Profile" sections.
- **Expected Result:** Earned assets (Gems/Certificates) should be permanently synced and visible.
- **Actual Result:** Data appears to be missing or failing to fetch from the database.
- **Technical Note:** Check the **Sync Logic** between the local SQLite/CoreData and the Backend API.

UPDATE :

Issue 2: Course Completion Syncing Error

- **Summary:** Courses remain marked as "Incomplete" even after the user finishes all lessons.
- **Description:** After a user completes the final lesson of a course, the progress bar or status does not update to "Completed."
- **Expected Result:** The course status should immediately transition to "Completed" and trigger certificate generation.
- **Actual Result:** The app still shows the course as active/incomplete.
- **Technical Note:** Potential **Race Condition** or failure in the POST request that updates the `course_user` pivot table status.

UPDATE :

Issue 4 . On Tuesday I started the app and my day streak was set back to 1, even though I had a streak of 43 days at that time. I have no idea why this happened.

UPDATE :

Issue 6. I recently started this but the screen doesn't go fullscreen so my tablet taskbar covers the bottom bit of the screen for the app. it cuts off buttons and causes the main ui to be scrunched.

UPDATE :

Issue 7 : In the python programming course, basic concept module - I am not able to access the first few planets: introduction to challenges planet, even though I have completed them previously, now they show me no stars for completion below the planet, and I am also not able to click and access the planets.

UPDATE :

Issue 8 : There is a problem with the "user input" course. I can't finish with any stars, so it looks like I've not finished that lesson.

UPDATE :

Issue 9 : I am asked to install Python every time I go to the code playground, or in the "try it" section of lessons. Is there a way to make the installation permanent?

UPDATE :

10.

Please don't remove this information

Device OS: Android

Device OS version: 15

App Version: 1.7.4

App Version Code: 228

Device Brand: motorola

Device Model: moto g64 5G

Device Manufacturer: motorola

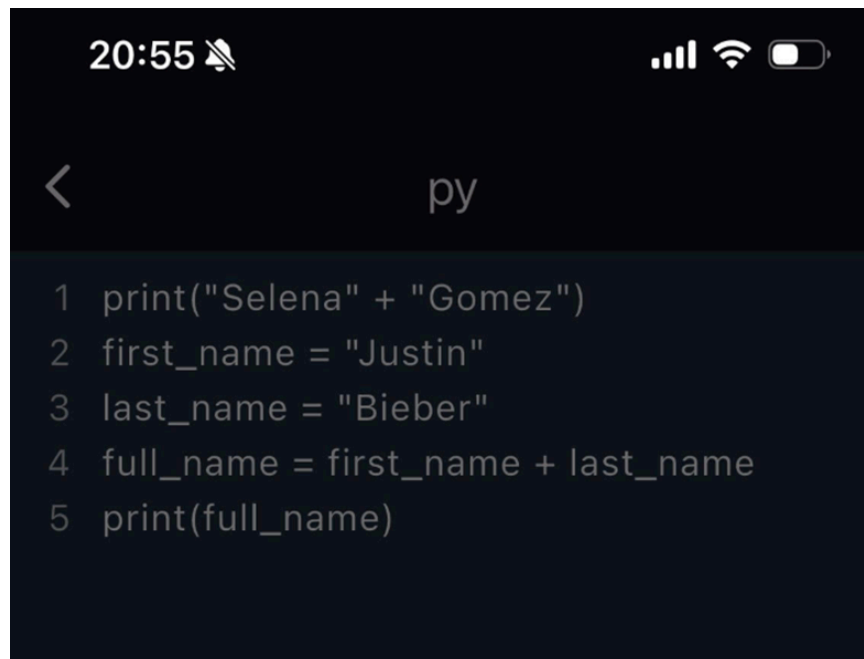

The app is opening in full screen but the top and bottom menu and buttons are not working and overlapping with the top screen menu and bottom buttons.

12.

I get an error when I attempt to run code with a lesson.

I just sits there with the spinning planet

See screen shot below-

13.

Please don't remove this information

Device OS: Android

Device OS version: 12

App Version: 1.7.4

App Version Code: 228

Device Brand: motorola

Device Model: moto g31

Device Manufacturer: Motorola

The Touch in a settings don't work and when working it's very difficult, please fix this

User issues :

14.

Device OS : Android
Device OS version : 13
App Version : 1.7.4
App Version Code : 228
Device Brand : samsung
Device Model : SM-G770F
Device Manufacturer: samsung

Issue Faced by user : I cant enter react js course, after introduction to level what is react

15 .

Device OS : Android
Device OS version : 10
App Version : 1.7.4
App Version Code : 228
Device Brand : samsung
Device Model : SM-A750F
Device Manufacturer: Samsung

Issue Faced by User : Have an issue wuth decision making module it always gives wrong answer .

16 .

Device OS : Android
Device OS version : 13
App Version : 1.7.4

App Version Code : 228

Device Brand : POCO

Device Model : 2207117BPG

Device Manufacturer: Xiaomi

Issue Faced by User : First thanks for made this usefull programm but I can't connect to my Gmail accounts and start my courses in the app. When I pressed the log in button it massage me . An internal error has occurred. Please solve this problem.

17 .

Device OS : Android

Device OS version : 12

App Version : 1.7.4

App Version Code : 228

Device Brand : realme

Device Model : RMX3690

Device Manufacturer : realme

Issue Faced by User : I would like to report an issue I am facing with the Programming Hero app. Some of the settings in the app are not working properly on my device. When I try to change or adjust certain settings, they either do not respond or do not save the changes.I have already tried restarting the app and checking my internet connection, but the problem still persists. Please look into this issue and let me know if there is any solution or update required from my side.

18 .Change app language button is unresponsive when pressed

Device OS : Android

Device OS version : 13

App Version : 1.9.0

App Version Code : 241

Device Brand : samsung

Device Model : SM-A037M

Device Manufacturer : samsung

19. Why can't I set the app to Russian?

Device OS : Android

Device OS version : 13

App Version : 1.9.0

App Version Code : 241

Device Brand : TECNO

Device Model : TECNO BG6

Device Manufacturer : TECNO

20 . After changing my device, I can't access programing hero pro with the same mail anymore.

Device OS : Android

Device OS version : 15

App Version : 1.7.4

App Version Code : 228

Device Brand : motorola

Device Model : motorola edge 50 fusion

Device Manufacturer : motorola

21 . Set python package automatically in the terminal . User can to able to install python package in the terminal .

22 . The app is opening in full screen but the top and bottom menu and buttons are not working and overlapping with the top screen menu and bottom buttons.

UPDATE :

23.

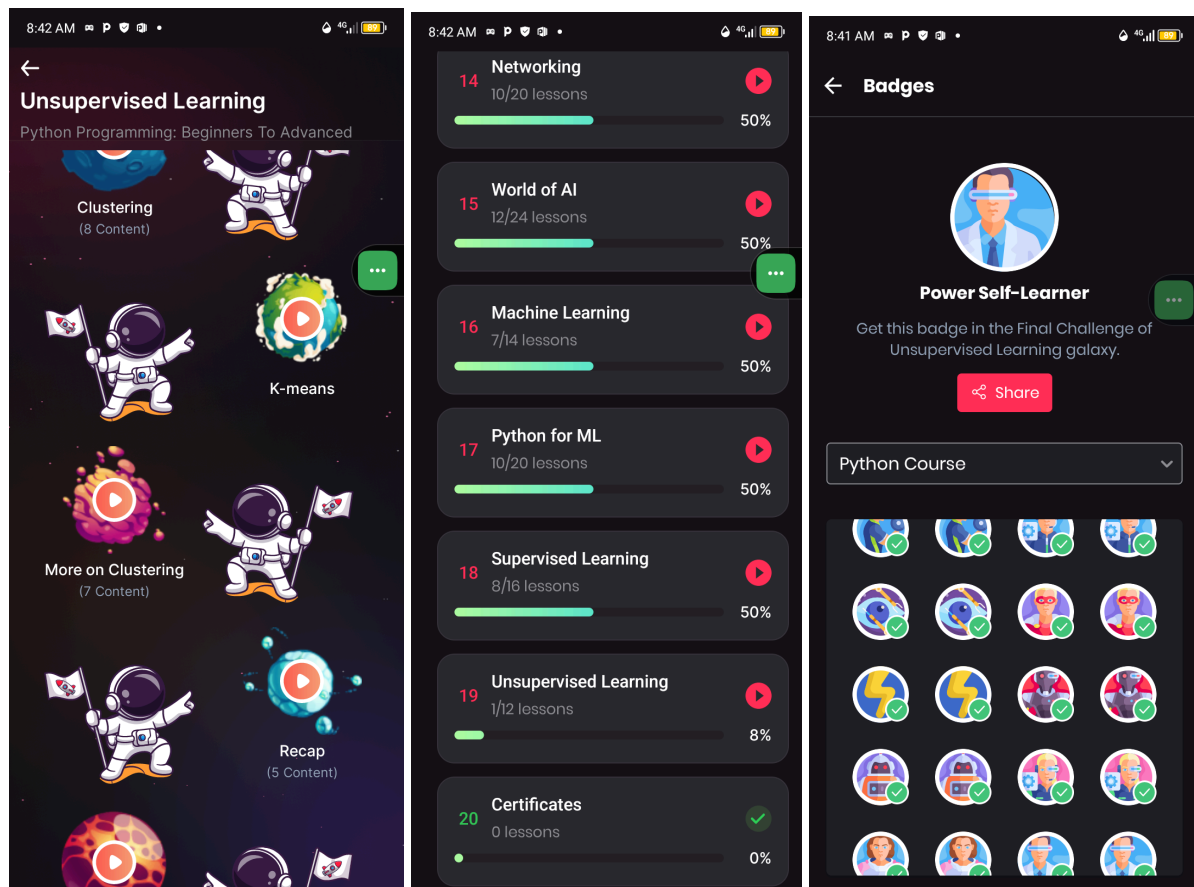

I hope you're doing well. I'm a Fibu user and I'm having a major issue with my final certificate.

I've completed all the galaxies in the course and earned the badges to prove it. I already have 2 certificates from earlier modules. I was supposed to take the final exam before April 1st, but when I tried, I was told I needed to complete the lessons first. This is confusing because I've already finished them all.

I also noticed a bug starting from the "More Data Types" galaxy. Even though I completed it and received the badge, the progress bar still shows it as incomplete. I have updated the app countless times too. I've retried the galaxy multiple times, but the progress bar never updated. The same issue happened with the galaxies after it, all the way to the last one.

To summarize:

1. All galaxies show as completed with badges earned
2. Progress bars incorrectly show some galaxies as incomplete
3. Because of this, I cannot access the final exam to get my last certificate

24 . Hello, I'm having trouble getting output from the code editor. Whenever I hit the **run button**, it's supposed to display outputs. But it takes me to Terminal instead... And below is the message I get from the terminal

```
/data/data/com.learnprogramming.codecamp/files/usr/bin/b  
ash: line 1: /data/data/com.learnprogramming.codecamp/fi  
les/usr/bin/python: Permission denied
```

```
[Process completed (code 126) - press Enter]
```
