

Programming Hero App :

Report Title: Programming Hero App Testing

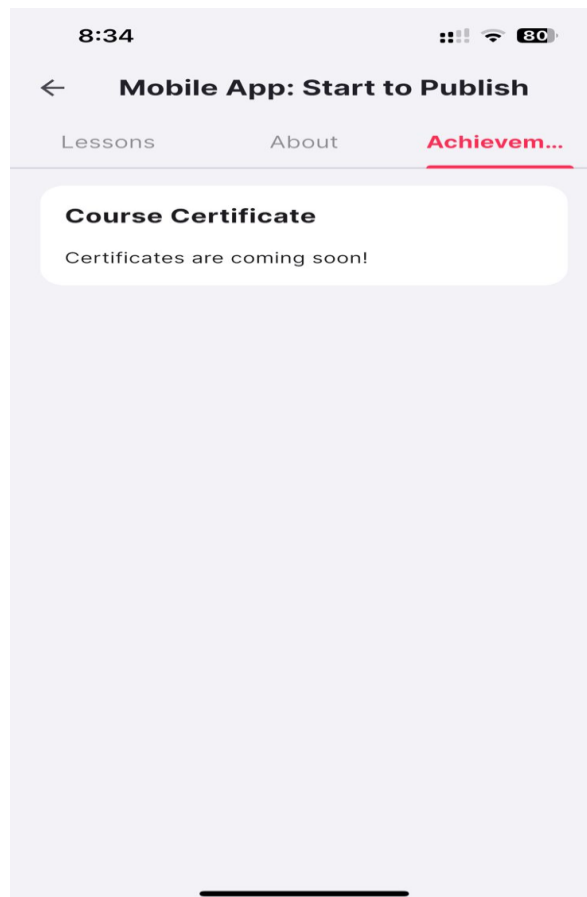

Test Date: 01/02/2026

Tester: Mostaque Shahriar Tonmoy

Platform: iOS

Network: Wi-Fi & Mobile Data Both

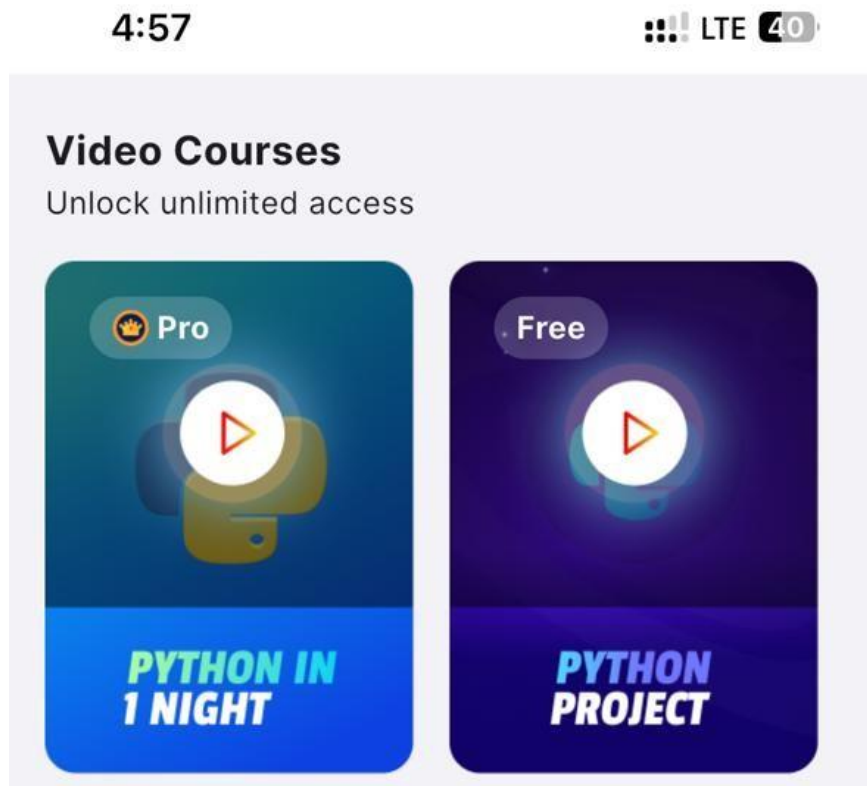

1. Python programming Beginners to advance → Let's start → I noticed a small issue while using the app. After logging in and scrolling through a course section till the end, the screen started flickering when I scrolled once at the bottom. Issue link : [Flickering issue](#)
2. While testing the Programming Hero app, I noticed that in the Achievement section, the certificate template for a completed course is supposed to be displayed. However, this does not appear consistently for all courses. I believe that if the certificate template is shown for every completed course in the Achievement section, it would significantly encourage users and increase their motivation to complete courses. I wanted to share this as a potential improvement.

3. For Home page : I suggest placing the home page videos under three clear sections—either **Free, Paid, and Advanced Courses** or **Development, Programming, and Advanced Courses**—to make the content more structured and easier for users to choose from.
4. I would like to suggest structuring the Home page with three primary sections at the top. Under these sections, different courses can be grouped—either as **Free, Paid, and Advanced Courses** or as **Development, Programming, and Advanced Courses**.

Within each section, the videos can be displayed in a grid-style layout similar to the attached example, allowing multiple videos to be visible on the screen at the same time. This approach would make the Home page more engaging and help users explore a wider range of courses more easily, increasing their chances of discovering content that matches their interests.

5. While testing the app, I noticed that in the **Playground** section, users can create a project, but the project does not get saved properly.

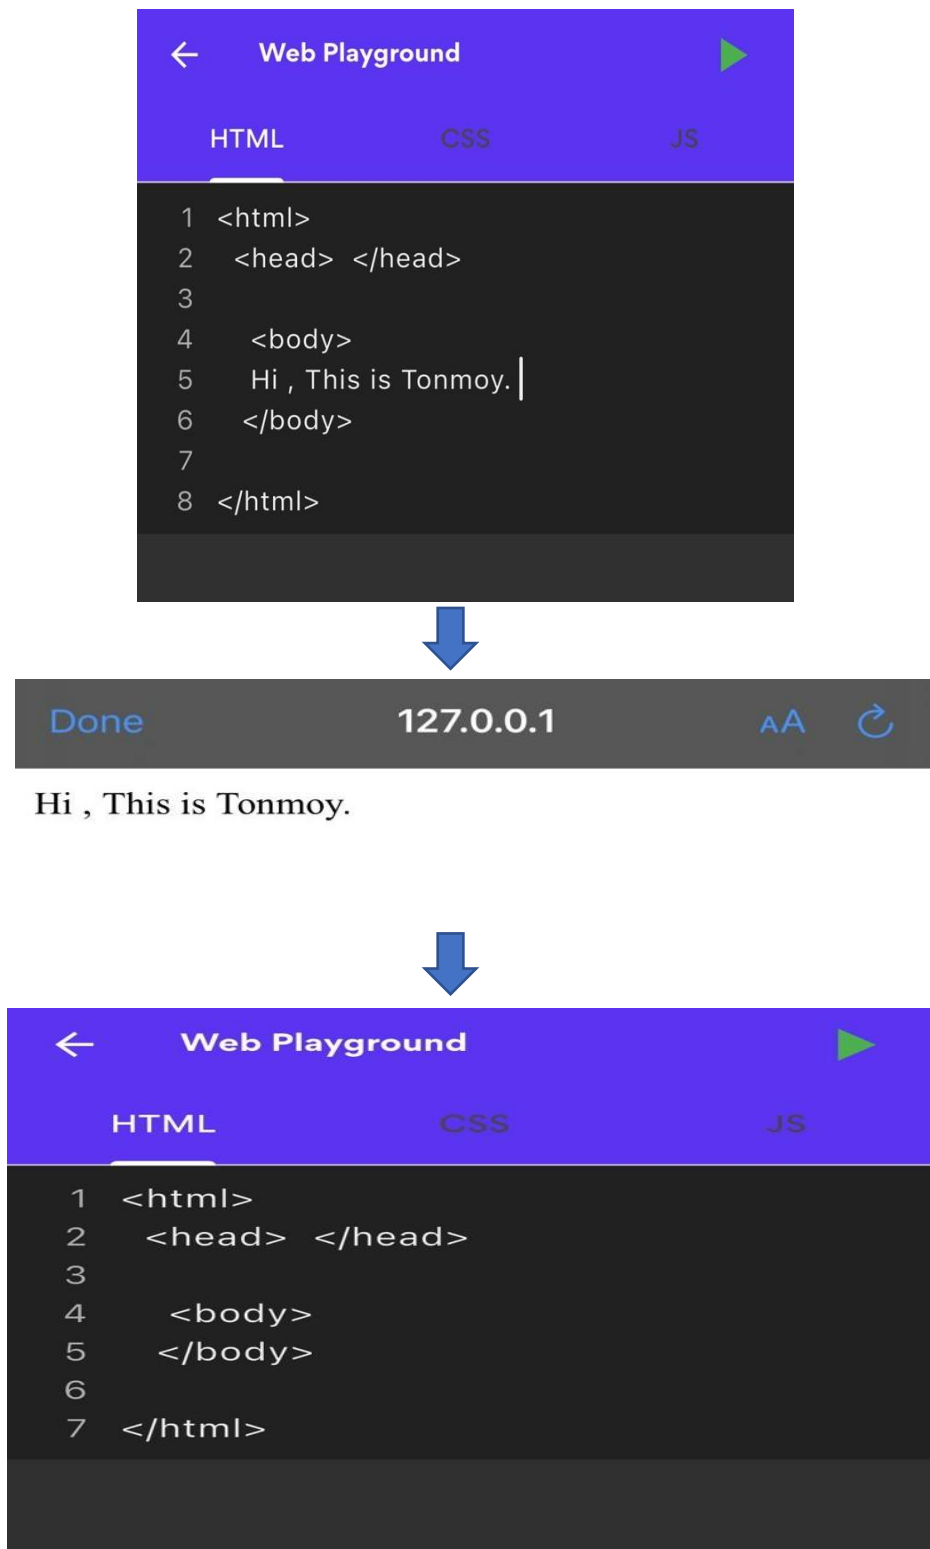

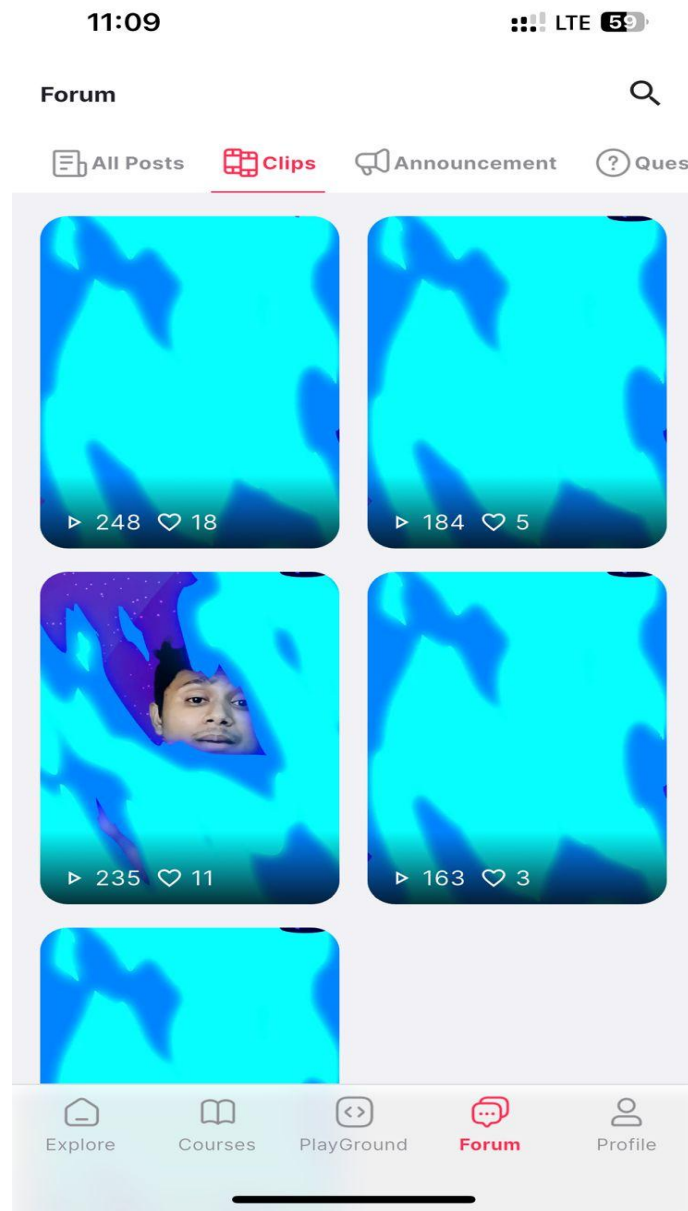

Image Flow : Unsave Project Flow

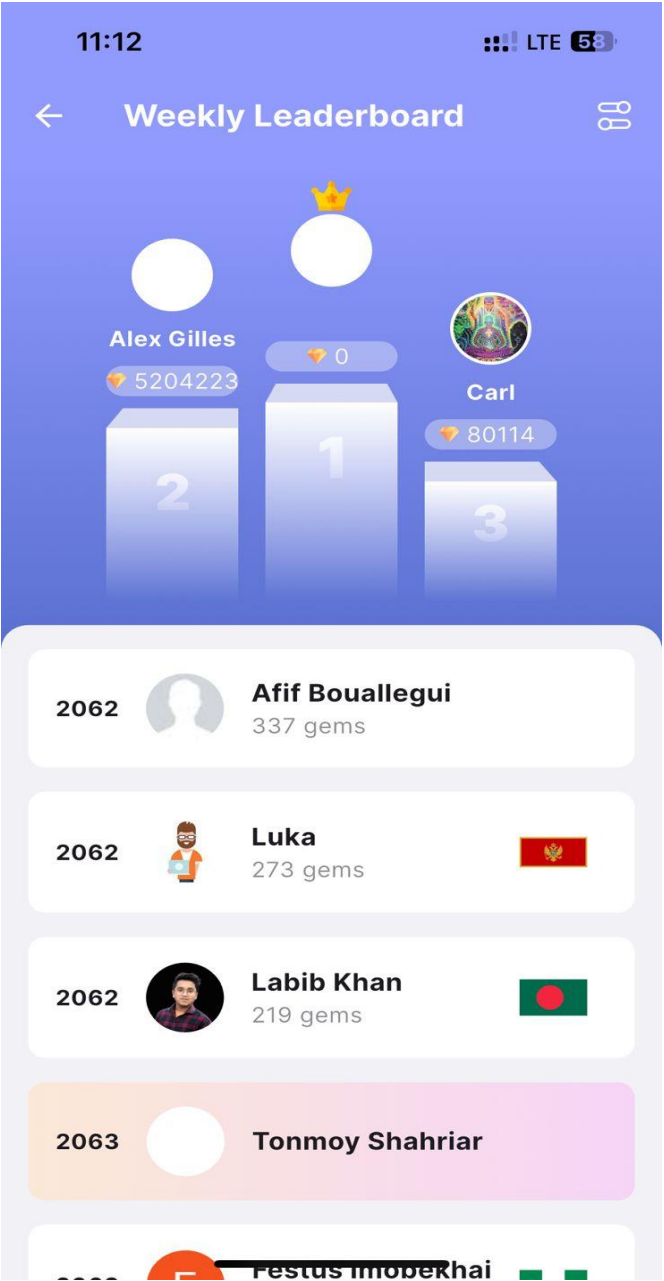

6. In Forum → Clips, the video thumbnails posted from the admin panel don't look very eye-catching. Improving the thumbnail design could make the section more engaging for users .

7. While reviewing the Leaderboard screen, I noticed that the ranking logic is not clearly explained. Although it shows positions and “gems,” it’s unclear what activities contribute to earning gems, what time period the leaderboard covers (e.g., weekly), and how the score is calculated.

This lack of clarity may confuse users and reduce engagement, since they may not understand how to improve their rank. Adding a short explanation (e.g., “How it works” / info tooltip) and clearly stating the scoring criteria and timeframe could make the leaderboard more transparent and motivating.
